

1. Hadoop is a/an:

A. Analytics platforms.

B. IoT Application Enablement Platforms.

C. Device management platforms.

D. Connectivity management platforms.

2. A SigFox device can send max of 12 bytes in one message.

True

False

3. in a proper IoT solution architecture, choose all the correct answers,.

A. Applications can directly communicate with the IoT devices whenever needed.

B. The IoT AEP is a middle layer between IoT devices and IoT applications and hence, IoT AEP controls which IoT application is allowed to communicate with which IoT devices

C. Sometimes devices can directly communicate with the IoT applications.

D. IoT Applications are built on top of the AEP

4. Nokia WING is

A. A connectivity management platform.

B. An application enablement platform.

C. A device management platform.

D. An analytics platform.

5. An Embedded system engineer is responsible of developing IoT devices

True

False

6. ISS is a LEO satellite for IoT connectivity

True

False

7. Kineis, SWARM and Lacuna can provide global IoT connectivity through global SIM

True

False

8. MQTT is a TCP/IP based protocol, hence, it is not supported in SigFox.

True

False

9. Arduino and Raspberry Pi are by default suitable for commercial IoT solutions.

True

False

10. One of the main challenges for traditional mobile networks is Roaming services

True

False

11. Vodafone GDSP Is

A. Analytics platform.

B. IoT Application Enablement Platform.

C. Device management platform.

D. Connectivity management platform

12. AEP Data Collection module is responsible for all the following except:

A. Generating data missing alarms

B. User's access rights

C. Rule based engine

D. Data correlation

13. Emnify is a LEO satellite IoT carrier network

True

False

14. CoAp is still a widely support IoT Application protocol:

True

False

15. Lacuna provides IoT LoRaWan satellite connectivity.

True

False

16. the main purpose of a connectivity management platform

A. is to manage a connected device

B. is to calculate the max amount of data used by a connected device.

C. is to measure the device connectivity total period of time

D. is to enable or disable device connectivity based on some conditions

17. An Embedded system engineer is responsible for designing an end-to-end IoT solution.

True

False

18. ZigBee, Inginu, Z-wave and Wi-Sun are all

- A. Licensed wireless technologies
- B. Long distance wireless technologies
- C. Low power technologies
- D. Unlicensed wireless technologies**

19. All IoT Devices include realtime operating system.

True

False

20. CISCO Jasper wireless is

- A. A connectivity management platform.**
- B. An application enablement platform.
- C. A device management platform.
- D. An analytics platform.

21. The IoT Gateway is featured by its ability to support multiple wireless technologies towards the devices and multiple carrier networks towards the IoT platform.

True

False

22. Carrier networks transfer data from device to gateway.

True

False

23. Verizon ThingSpace is

- A. A connectivity management platform.**

B. An application enablement platform.

C. A device management platform.

D: An analytics platform.

24. An individual can buy a LoRaWan gateway and install it at home if he can get the right approvals from telecom regulatory authority

True

False

25. Grok belongs to category of

A. Analytics platforms.

B. IoT Application Enablement Platforms.

C. Device management platforms.

D. Connectivity management platforms.

26. Sigfox admiral is a global IoT satellite connectivity.

True

False

27. Z-Wave operates only at distances (up to 100 meters).

True

False

28. Which one out of these is not an operational module in IoT platforms

A. Tasks Management

B. Assets Management

C. Users Management

D. Alarm Management

29. FiWare, Hadoop and Gemalto are all

A. Open source platforms.

B. IoT Application Enablement Platforms.

C. Device management platforms.

D. Connecti, 4" anagement platforms.

30. NB-IoT wireless technology:supports MQTT application protocol

True

False

31. The main challenge for IoT Wireless technologies is to save device battery consumption

True

False

32. 868 MHz is the ISM band used for IoT devices in Europe, middle east and Africa

True

False

33. Which one out of these is not low-power wide-area network (LPWAN) technology ?

A. SigFox

B. WiFi

C. Weightless-P

D. LoRa

34. The functionality of Connectivity management is to

A. Monitor the content of the data connectivity.

B. Enable/Disable each device connectivity,

C, Handel the billing for the connectivity.

D. Manage connectivity roaming.

35. LoRaWan is a one global network with no need for roaming service subscription

True

False

36. Ericsson DCP is

A. Analytics platform.

B. IoT Application Enablement Platform.

C. Device management platform

D. Connectivity management platform

37. FossaSat is a global IoT carrier network over GEO satellite

True

False

38. A SigFox device can download a max of 32 byte per day.

True

False

39. The functionality of Users Administration module includes

A. Define and group users

B. Manage application access rights

C. Manage device access rights

D. All the mentioned

40. A video camera is considered as a standard IoT device.

True

False

41. Arduino, Raspberry Pi, motioT kit, Spark and Galileo and BeagleBoard are all

A. IoT devices.

B. IoT Innovation Kits

C. IoT Prototyping boards

D. IoT components

42. B-Scada belongs to category of

A. Analytics platforms

B. IoT Application Enablement Platforms.

C. Device management platforms

D. Connectivity management platforms.

43. MQTT application protocol is the most suitable protocol for data transfer in IoT because it is

A. Light weight protocol.

B. Bi-directional protocol.

C. Suitable for limited devices.

D. All of the mentioned

44. The functionality of Visual development environment module includes

- A. Drag and drop development environment
- B. Set & Get plugin parameter values
- C. Include a code window

D. All the mentioned

45. All IoT Devices must be connected to the internet or to 4 private network.

True

False

46. Balena is a/an

- A. Analytics platform.
- B. IoT Application Enablement Platform.

C. Device management platform.

D. Connectivity management platform.

47. The responsibility of "Device & Gateway management platform" is

- A. to do remote device configurations
- B. to do remote device firmware updates

C. to do remote device configurations and remote device firmware updates

D. to collect sensors data from the device

48. The memory and CPU capabilities of an IoT Gateway should be relative to:

- A. Number of devices connected to the Gateway.

- B. Number of messages sent from every device.
- C. Amount of time it can be disconnected from the internet.
- D. All of the mentioned.**

49. A complete IoT value chain' consists of:

- A. 5 components
- B. 12 components
- C. 8 components**
- D. 3 components

50. The main functionality of Data acquisition module includes the following except

- A. Collecting data from the device
- B. Generate data missing alarm
- C. Having a rule based engine
- D. Sending configuration parameters to the device**

51. LoRa is a one global network with no need for roaming service subscription.

True

False

52. Contiki-OS, FreeRTOS, Riot-OS, OpenWrt, TinyOS are all

- A. IoT Application Enablement Platforms
- B. IoT device management Operating System
- C. Real Time Operating Systems**
- D. Open Source Operating Systems

53. An individual can buy a SigFox micro BTS and install it at home after getting the right approvals from telecom regulatory authority.

True

False

54. IoT Integration engineer is responsible of developing IoT devices

True

False

55. Number of main modules of an Application Enablement Platform is

A. 3

B. 4

C. 5

D. 6

56. LoRa can be used to transfer video

True

False

57. ISM is licensed frequency band for IoT connectivity

True

False

58. MQTT application protocol is the most suitable protocol for data transfer in IoT because it is

A. Light weight protocol.

B. Bi-directional protocol.

C. Suitable for limited devices.

D. All of the mentioned

59. Which one out of these is not a component of IoT value chain:

A. Device

B. Gateway

C. Standard Web server

D. Carrier network

60. ThingWorx belongs to category of

A. Analytics platforms.

B. IoT Application Enablement Platforms.

C. Device management platforms.

D. Connectivity management platforms

61. It is the responsibility of the IoT Solution architect to design an end-to-end IoT solution.

True

False

62. MasterOfThings belongs to category of

A. Analytics platforms.

B. IoT Application Enablement Platforms.

C: Device management platforms.

D. Connectivity management platforms.

63. in a proper IoT solution architecture, an IoT AEP (Application Enablment Platform) is mandatory becuase, choose all correct answers

- A. Gurantees a standard way of working for all IoT applications
- B. IoT AEP controls users access rights towards the applications
- C. IoT AEP controls users access rights towards IoT devices
- D. IoT AEP fasters the application development process.

64. The main challenge for NB-IoT networks is Roaming services

True

False

65. Kaa is a/an

- A. Analytics platform.
- B. IoT Application Enablement Platform.
- C. Device management platform.
- D. Connectivity management platform

66. Lacuna is a global sim provider

True

False

67. The functionality of Device Profile Definition module includes all the following except

- A. Define devices
- B. Allow device optional information
- C. Collecting data from the device
- D. Export and Import devices

68. CoAp is a legacy light weight IoT application protocol

True

False

69. A global SIM is a sim card for IoT devices with roaming services granted in most of the countries world-wide

True

False

70. LoRa wireless technology supports MQTT application protocol.

True

False

71. LoRa cannot be used to transfer video but LoRaWan can.

True

False

72. All IoT Devices include a CPU or micro processing chip

True

False

73. Hadoop is an IoT platform.

True

False

74. A SigFox device can send up to 24 bytes of data in one message.

True

False

75. Thinglo belongs to category of

A. Analytics platforms.

B. IoT Application Enablement Platforms.

C. Device management platforms.

D. Connectivity management platforms.

76. Bosch IoT suite is a/an

A. Analytics platform.

B. IoT Application Enablement Platform.

C. Device management platform.

D. Connectivity management platform.

77. SigFox can operate as private network.

True

False

78. Carrier network transfer data from device to IoT AEP or from gateway to the IoT Application Enablement platform.

True

False

79. Both Arkessa and SWARM are global IoT SIM providers

True

False

80. HTTP is a good Application protocol for IoT

True

False

81. FiWare is a device management platform

True

False

82. All IoT Devices include real time operating system.

True

False

83. 3G networks drain IoT device battery power.

True

False

84. Splunk is a/an.

A. Analytics platforms.

B. IoT Application Enablement Platforms.

C. Device management platforms.

D. Connectivity management platforms.

85. A SigFox device can send up to 1680 byte per day.

True

False

86. SigFox, Weightless-P, WiFi and LoRa are all

A. LPWAN technologies

B. Long distance wireless technologies

C. All operate in the unlicensed frequency rang

D. Low power technologies

87. WebSockets is a bidirectional communication application protocol but it is not suitable as IoT application protocol because it consumes server memory

True

False

88. NB-IoT wireless technology supports both TCP/IP and UDP

True

False

89. The functionality of Users Administration module includes

- A. Define and group users
- B. Manage application access rights
- C. Manage device access rights

D. All the mentioned

90. Zigbee can be used to transfer video

True

False

91. SigFox wireless technology supports MQTT application Protocol.

True

False

92. IoT AEP can be used to process video feeds from an IoT camera.

True

False

93. MQTT is an ISO standard IoT application protocol.

True

False

94. Zigbee operates only at distances (up to 100 meters).

True

False

95. It is possible for battery operated IoT devices to send its data even if it is the desert or in the ocean ?

True

False

96. SigFox is a one global network with no need for roaming service subscription.

True

False

97. NB-IoT is not a bidirectional (upload & download) wireless technology.

True

False

98. The memory and CPU capabilities of an IoT gateway should be relative to number of devices connected to the gateway

True

False

99. Wifi uses the same ISM band similar to BLE

True

False

100. The purpose of IoT prototyping boards:

- A. Developing proof of concept
- B. Testing IoT project idea
- C. Verifying and approving an IoT project concept

D. All of the mentioned

101. AEP module that defines sensors, drivers, sensor readings, reading data types is called:

- A. Data collection and monitoring
- B. User definition and administration
- C. Device/sensor Profile definition
- D. Visual application development environment

102. IoTM is an over the top for

- A. Connectivity management platforms
- B. Application enablement platforms
- C. Device management platforms
- D. Analytics platforms

103. IBM watson belongs to category of:

- A. Analytics platforms
- B. IoT Application enablement platforms
- C. Device management platforms
- D. Connectivity management platforms

104. TheThinglo belongs to category of:

- A. Analytics platforms
- B. IoT Application enablement platforms
- C. Device management platforms
- D. Connectivity management platforms
