

FLOWOPS AI

The AI Operations Manager for Enterprises

“Turn emails, chats, and forms into automated business actions.”

1 What FlowOps Is (Real Enterprise Product)

FlowOps is an **internal AI platform** that handles:

- Leave requests
- Purchase approvals
- IT tickets
- Travel approvals
- HR queries

by using **multi-agent AI** connected to company systems.

Employees just say:

“I need 3 days leave next week”

or

“Order a new laptop for Ahmed”

FlowOps handles:

- Validation
 - Policy checking
 - Manager approval
 - System updates
-

2 Who pays

Mid-size and large organizations that already use:

- Jira
- SAP

- Microsoft 365
- ServiceNow
- HR systems

They want to:

- Reduce manual work
- Reduce errors
- Speed up approvals

3 MVP Scope (4 weeks)

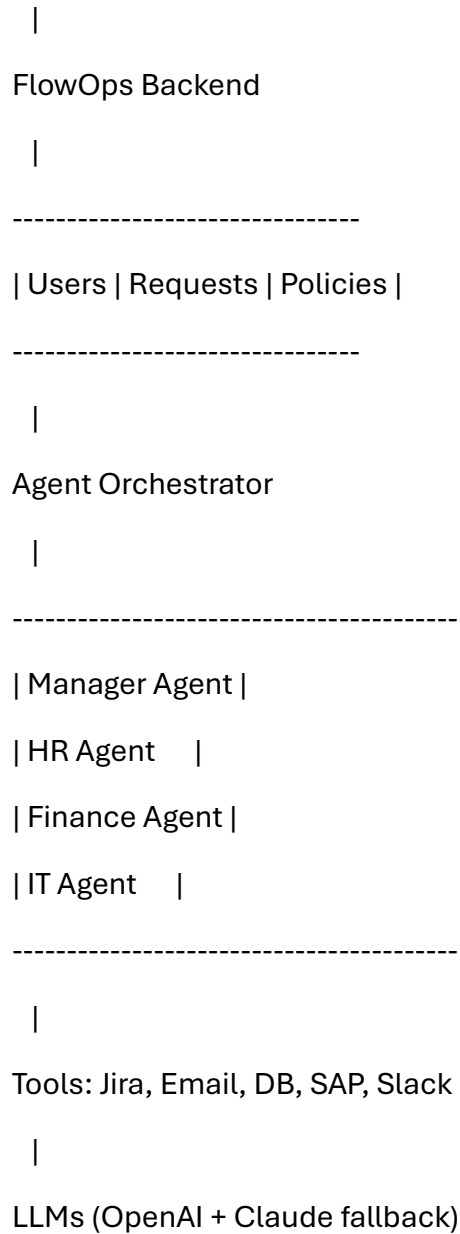

Capability	Included
Chat-based requests	✓
Email ingestion	✓
RAG over company policies	✓
Multi-agent workflow	✓
HR + IT + Finance flows	✓
Approval workflows	✓
Audit log	✓
Role-based access	✓
Voice input (optional)	✓

4 System Architecture

Web UI (React)

|

API Gateway

5 RAG (Policy Brain)

FlowOps uses RAG over:

- HR policies
- Finance rules
- IT manuals
- Company SOPs

When someone asks:

“Can I buy a laptop for a new hire?”

The AI:

- Retrieves policy
- Checks limits
- Applies rules
- Explains the decision

No hallucinations.

Everything is **document-backed**.

Agent Design (Gold-tier)

FlowOps uses **Hierarchical Agents**.

Manager Agent

- Breaks request into tasks
- Assigns to worker agents
- Merges results

Worker Agents

Agent	Role
--------------	-------------

HR Agent	Leave, contracts
----------	------------------

Finance Agent	Budget, invoices
---------------	------------------

IT Agent	Hardware, software
----------	--------------------

Each agent:

- Uses tools
 - Checks RAG
 - Reports back
-

7 Tools

Tool	What it does
get_employee()	HR data
get_policy()	RAG
create_ticket()	Jira / ServiceNow
send_email()	Approvals
update_budget()	Finance
log_action()	Audit
All tool calls are logged.	

8 Multimodal

FlowOps supports:

Mode	Use
Voice	Speak requests
Documents	Upload receipts, invoices

9 Security (Enterprise-grade)

Risk	Control
Unauthorized approvals	Role-based limits
Prompt injection	Sanitized input
Data leaks	Tenant isolation
Audit	Every action logged
Agent abuse	Approval thresholds

1 0 Why This Is Real

FlowOps is in the same category as:

- Moveworks (AI IT assistant)
- ServiceNow AI
- UiPath Autopilot
- Microsoft Copilot for Business

This is exactly what enterprises are spending millions on.

1 1 Why it's perfect for capstone

Students will build:

- AI agents that **do things**
- Not just chat
- With enterprise safety, logs, and controls

This matches:

- Consulting jobs
 - Government IT
 - Corporate digital transformation
-
